MEMORANDUM

TO: Florida Emergency Medical Services (EMS) Communication Plan, Volume II Recipients

FROM: Joshua Blood, Chief of Public Safety, Division of Telecommunications

DATE: April 6, 2023

SUBJECT: Florida Emergency Medical Services (EMS) Communications Plan, Volume 11, 2023 Edition

The Florida Emergency Medical Services {EMS} Communications Plan, Volume II has been revised and is now available online.

This revision includes the following updates:

- Verified new, active, and inactive Emergency Departments, EMS Providers, and EMS Air Transports. Added and removed from EMS Communications Plan, accordingly.
- Moved EMS Air Transport listings, Section 3.3, into Emergency Departments/EMS Providers listing, Section 3.2.
- Moved EMS Air Transport Information verbiage from Section 3.3 to new Section 3.2.4.
- Removed Section 3.3 EMS Air Transport Information.
- Added Vehicle Dispatch and Response UHF MED Channels to county listings, Section 3.2.
- Removed Statewide Medical Coordination (SMC) UHF MED-8 Channel from county listings, Section 3.2. SMC UHF MED-8 no longer supported throughout the State.
- Verified active and inactive Emergency Departments in Section 4.2 Alabama and Section 4.3 Georgia. Removed inactive Emergency Departments from EMS Communications Plan accordingly.
- Removed Section 5 (previous version) Hospital Latitude/Longitude Coordinates.

Because this plan is designed to be carried as a softcopy on all transport permitted vehicles within the state, more periodic revision may occur to keep section 3 current - particularly where telephone numbers and MED channel assignments are noted as "to be determined" (TBD). If you need hardcopies for your transport vehicles, use the link below to print them:

https://www.dms.myflorida.com/business_operations/telecommunications/public_safety_communications/radio_communications_services/radio_communications_plans

If you have any comments or questions regarding these revisions, please call (850) 413-9213, or send email to EMSCOMMS@dms.fl.gov.

Sincerely,

Joshua Blood
Bureau Chief Public Safety, Division of Telecommunications

1 1 INTRODUCTION

1.1 Purpose

Volume 2 of the Emergency Medical Services (EMS) Communications Plan (EMSCP) developed as an operational “field manual” and designed to contain information useful for day-to-day operations to provide the data necessary to enable radio communications during transport operations in unfamiliar areas, including neighboring counties in Georgia and Alabama.

The Department of Management Services invites suggestions regarding the contents of this EMSCP. Please submit any recommendations or corrections for this EMSCP to DMS by email to EMSCOMMS@dms.fl.gov.

1.2 Summary

Section 2.0 “OPERATIONAL INFORMATION” contains best practice information for correct operation of communications equipment.

Section 3.0 “EMS FREQUENCY ALLOCATIONS” contains an alphabetical listing by county of all radio frequencies, talk-groups, or both for EMS operations within the state, as well as hospital emergency department (ED) addresses and telephone information. In addition, radio dial codes are shown for those counties using selective addressing for radio communications with hospitals. The city and telephone number of each provider is listed. The air ambulance providers are also listed by county, showing contact information, frequency allocation and latitude/longitude coordinates (when applicable). Except for MED channel assignments and ED phone numbers, the hospital ED information is based on the database of acute care facilities recognized by the Agency for Health Care Administration (AHCA). The EMS providers listed in this section are also based on the licensure database from the Florida Department of Health (DoH).

Section 4.0 “INTERSTATE COORDINATION” gives a general description of the EMS communications systems in adjacent counties in Georgia and Alabama.

Section 5.0 “WIDE-AREA AND STATEWIDE INTERSERVICE/ MUTUAL AID FREQUENCIES” lists the channel usage, eligibility, primary use, and statewide mutual-aid frequencies available for utilization in Florida.

2 OPERATIONAL INFORMATION

2.1 Operating Practices

While providing emergency health care to the public, many of the individual participants practicing in the EMS system are required to communicate with one another via two-way radio communications. Good operator practice is essential to the effectiveness and efficiency of any public safety communications system. For EMS, good operator practice followed by an emergency medical technician (EMT), paramedic, dispatcher, physician, nurse, or other emergency department personnel relates directly to a reduction in response time which in turn saves lives, reduces further injuries, and minimizes suffering.

2.1.1 Equipment Familiarization

The first step in proper communications techniques is familiarization with the radio equipment to be used by the operator. There are different brands and types of radio equipment that EMS personnel will encounter in their work. As a minimum, communications systems are comprised of mobile and/or portable radios, base/repeater stations and various radio-controlled devices. The EMS personnel should be trained sufficiently on all equipment used for communications in order to maximize the extent in delivery of emergency services.

2.1.2 Communications Skills

The objective of radio communications in EMS is to convey information in a concise and accurate manner.

A. Operating Protocol

The following key points are an attempt to benefit operator personnel.

- Follow standard protocol established by the EMS service.
- Maintain channel discipline. Courtesy and respect for the communications of others sharing the radio channel, **monitor the channel before transmitting to prevent interference to other users**. Think ahead and keep transmissions short and to the point to maximize airtime.
- Practice verbal communications skills. Speak clearly, at a moderate rate, and directly into the microphone or handset to maximize intelligibility.
- Use plain language to describe a particular condition or event.

B. Technical Considerations

- Key your transmitter for **at least one second** before engaging in speech. Pausing one second after depressing the push-to-talk button on the microphone or headset (for example, inhaling) is sufficient in most cases to prevent missed words or responses.
- Keep loudspeakers clear of clutter.
- Avoid turning receiver volume too low.

3 EMS FREQUENCY ALLOCATIONS

3.1 General

The following tables of radio channel allocations and organizational data for EMS communications within Florida have been incorporated into a database to be maintained over time for future revisions. As with any database of this size, errors and omissions are bound to occur. The Department requests all organizations to review the data applicable to them, and to advise the department of any changes or additions.

3.2 Allocation Tables

The following tables are organized alphabetically by county. Within each county there is a listing of EMS radio channel/system information, followed by information about emergency department facilities, EMS providers, and Air EMS providers.

3.2.1 Radio Channel Information

Radio channel information is shown by channel use description, continuous tone-controlled squelch system (CTCSS) frequency (in Hertz) and base-transmit and base-receive frequency (in MHz) or MED channel number. In the event of 800 MHz or 700 MHz systems, talk groups or conventional channels are shown.

A. MED Channel Frequencies

MED channel numbers 1 through 102 that are regulated by Federal Communications Commission (FCC) rules, and correspond to the following mobile/portable radio receive (Rx) and transmit (Tx) frequencies (in MHz):

Mobile/ Portable Radio Programming¹

MED Channel	Rx Frequency	Tx Frequency	Description	MED Channel	Rx Frequency	Tx Frequency	Description
1	463.000	468.000	LMC/CMC	6	463.125	468.125	LMC/CMC
12	463.0125	468.0125	LMC/CMC	62	463.1375	468.1375	LMC/CMC
2	463.025	468.025	LMC/CMC	7	463.150	468.150	LMC/CMC
22	463.0375	468.0375	LMC/CMC	72	463.1625	468.1625	LMC/CMC
3	463.050	468.050	LMC/CMC	8	463.175	468.175	Mutual-Aid ²
32	463.0625	468.0625	LMC/CMC	82	463.1875	468.1875	ESF8 Support ³
4	463.075	468.075	LMC/CMC	9	462.950	467.950	Dispatch
42	463.0875	468.0875	LMC/CMC	92	462.9625	467.9625	Dispatch
5	463.100	468.100	LMC/CMC	10	462.975	467.975	Dispatch
52	463.1125	468.1125	LMC/CMC	102	462.9875	467.9875	Dispatch

Base Station/ Repeater Programming

MED Channel	Tx Frequency	Rx Frequency	Description	MED Channel	Tx Frequency	Rx Frequency	Description
1	463.000	468.000	LMC/CMC	6	463.125	468.125	LMC/CMC
12	463.0125	468.0125	LMC/CMC	62	463.1375	468.1375	LMC/CMC
2	463.025	468.025	LMC/CMC	7	463.150	468.150	LMC/CMC
22	463.0375	468.0375	LMC/CMC	72	463.1625	468.1625	LMC/CMC
3	463.050	468.050	LMC/CMC	8	463.175	468.175	Mutual-Aid
32	463.0625	468.0625	LMC/CMC	82	463.1875	468.1875	ESF8 Support
4	463.075	468.075	LMC/CMC	9	462.950	467.950	Dispatch
42	463.0875	468.0875	LMC/CMC	92	462.9625	467.9625	Dispatch
5	463.100	468.100	LMC/CMC	10	462.975	467.975	Dispatch
52	463.1125	468.1125	LMC/CMC	102	462.9875	467.9875	Dispatch

¹ Talk-around use of mobile/ portable radios require simplex programming of the lower side (463.#### MHz) of the UHF pair for each channel.

² The MED-8 and MED-82 channels are exclusively reserved for MED-8 and MED-82 radio systems statewide with its respective CTCSS frequencies.

³ Ibid

B. CTCSS Frequencies

Continuous tone-controlled squelch systems (CTCSS) provide a reduction of nuisance interference in frequency modulated (FM) radio systems by incorporating a sub-audible tone onto the carrier frequency such that only a similarly keyed radio receiver will open its squelch circuit to receive the transmission. Although CTCSS by itself cannot prevent undesired "FM capture" from occurring due to nearby simultaneous co-channel transmissions, systems equipped with CTCSS will eliminate most interference from distant sources.

The CTCSS frequencies are designated by the Telecommunications/Electronic Industries Association (TIA/EIA) in TIA/EIA Standard 603. The following table is a portion of those CTCSS frequencies above 90 Hz and below 211 Hz, which are approved for EMS radio communications in Florida. There are two abbreviated code schemes for these frequencies in the following table – the Motorola codes and the Wolfsberg (WOLF) codes. To the extent possible, CTCSS tones within a local geographic area should be exclusively from either Group A or Group B to avoid false sensing due to adjacent tone frequencies.

GROUP A			GROUP B		
CTCSS FREQ (Hz)	MOTOROLA CODE	WOLFSBERG CODE	CTCSS FREQ (Hz)	MOTOROLA CODE	WOLFSBERG CODE
100.0	1Z	14	94.8	ZA	12
107.2	1B	16	103.5	1A	15
114.8	2A	18	110.9	2Z	17
123.0	3Z	22	127.3	3A	23
131.8	3B	24	136.5	4Z	25
141.3	4A	26	146.2	4B	27
151.4	5Z	28	156.7	5A	31
162.2	5B	32	167.9	6Z	33
173.8	6A	34	192.8	7A	37
186.2	7Z	36	210.7	M2	--
203.5	M1	38			

Excluded from the above list are CTCSS frequencies below 90 Hz which may cause unacceptably long receiver response times in some systems, frequencies above 211 Hz which may require special engineering considerations in production and frequencies which would receive interference from common 60 Hz, A.C. power systems and non-TIA/EIA frequencies offered by some manufacturers which would limit interoperability.

3.2.2 Emergency Department Information

For each county, emergency department facilities are listed by geographic (rather than postal) address, followed by the 24-hour telephone number of either the switchboard (MAIN), emergency department (E.D.) or both. Usage by MED channel, talk-group (TG) and/or conventional channel (CC) shown for emergency departments is current as of March 2023. Specific emergency department MED channel allotments have been assigned by the Florida, Department of Management Services (DMS) to each emergency department facility and are shown beside each facility under the column titled "Med Channel Assignment." Information pending is shown as "to be determined" (TBD).

3.2.3 EMS Provider Information

Within each county, EMS providers are listed alphabetically showing the telephone number of each provider. Telephone numbers are current as of March 2023.

3.2.4 EMS Air Transport Information

The EMS air transports are listed alphabetically by county showing the address, emergency phone and fax numbers for each agency. Assigned radio channel information is also provided for all rotary-wing aircraft. Fixed-wing aircraft will not have assigned channels included in this plan.

Communications for aeromedical services may utilize certain radio frequencies within the Aviation Services of 47 CFR (Code of Federal Regulations), "Aeronautical Enroute and Aeronautical Fixed Stations." The scope for aeronautical enroute stations is limited to the necessities of safety and primary operation of the aircraft. Sub-part I of 47 CFR does not allow for medical communications. These channels are associated with air-traffic control centers, airport control towers and "Unicom" communications systems. By design, these radio systems are limited in the communications coverage capabilities they would provide for low flying rotor wing aircraft. Given the limitations, by rule and/or design associated with these radio channels, their use by prehospital for flight following is not acceptable.

Frequencies within the applicable FCC rules may be utilized for air ambulance dispatch and response and/or medical coordination on a secondary basis to land-based systems. Licensing for implementation or expansion of air ambulance communications, for any frequencies within the public safety spectrum, requires prior approval by DMS. The EMSCP has established specific radio frequency allotments for both air primary and air secondary channels within Florida for aeromedical dispatch and/or flight following communications.

All licensed rotor wing aircraft and dispatch centers within the State of Florida shall have the ability to communicate on the air secondary frequency 155.340 MHz with a CTCSS of 167.9 Hz. This provides continued flight following with the aircraft while medical crews utilize their MED-channel as trunked radio to provide medical reports (LMC or SMC). Secondly this system provides a statewide radio for coordinating a mass casualty incident with aircraft that would necessitate communications with the various aircraft, dispatch centers and/or landing zone management. Further, this frequency shall provide EMS helicopter personnel with continued safety of flight situations in which a vehicle is out of its prime area and unable to access its dispatch center. Such use of the air secondary channel shall be limited only to the temporary duration of such situations unless otherwise approved in writing by DMS.

4 INTERSTATE COORDINATION

4.1 General

Medical emergencies near the state line of northern Florida often involve the mutual response of emergency medical service providers and hospital emergency departments in Alabama and/or Georgia. Interstate communications between providers and hospitals of all three states are necessary to support such EMS operations and mutual-aid agreements, as well as for wide-area mobilization of emergency response units during mass casualty incidents and disaster situations. This section describes the Very High Frequency – High Band portion of the EMS communications systems, radio frequencies and selective call addresses of hospitals and providers in the southernmost parts of Alabama and Georgia, which are readily accessible to providers and hospital emergency departments in the North Florida area.

4.2 Alabama

Each hospital has a specific radio dial code assigned to it. To access a hospital, select the appropriate channel and then dial the radio dial code of the desired hospital with an interrupted tone rotary dial encoder (HEAR/EACOM).
