

Vehicle and Machinery Rescue Technician Check List

Technician _____ Evaluator _____

Individuals that have been qualified as a Vehicle and Machinery Rescue Technician are required to maintain their skill level and must complete the following list of performance objectives every two years.

Vehicle and Machinery Rescue Skills	Date Performed	Evaluator
Plan for a vehicle incident		
Plan for a commercial/heavy vehicle accident		
Recognize the need for vehicle and machinery search and rescue		
Identify the resources necessary to conduct operations		
Initiate the emergency response system for vehicle and machinery rescue incidents		
Initiate site control and scene management		
Establish scene safety zones		
Establish fire protection		
Initiate and maintain traffic control at the scene of vehicle accidents		
Recognize general hazards associated with vehicle and machinery rescue incidents		
Mitigate and manage general and specific hazards associated with vehicle and machinery rescue incidents		
Size up and evaluate existing and potential conditions at vehicle and machinery rescue incidents		
Identify and control the hazards presented by the release of fluids and gases associated with the machinery, which include, but are not limited to, fuel, cutting or lubricating oil, and cooling water		
Identify probable victim locations and survivability		
Make a search and rescue area safe, including identifying and controlling hazards presented by the vehicle, its position, or its systems.		
Stabilize a vehicle or machine and their components		
Stabilize a common passenger vehicle		
Stabilize commercial/heavy vehicles		
Determine the heavy vehicle access and egress points		
Isolate and manage potentially harmful energy sources		
Identify, contain, and stop fuel release		
Determine the common passenger vehicle vehicle

4/14

access and egress points		
Create access and egress openings for rescue in light and heavy vehicles		
Protect a victim during extrication or disentanglement		
Disentangle victim(s)		
Remove a packaged victim to a designated safe area		
Package a victim prior to extrication or disentanglement		
Perform extrication and disentanglement operations involving packaging, treating, and removing victims trapped in vehicles		
Access victims trapped in a typical vehicle		
Access victims trapped in machinery		
Procure and utilize the resources necessary to conduct vehicle and machinery rescue operations		
Identify potential emergency events in buildings where mechanical equipment exists, such as elevators and develop a preplan		
Perform extrication and disentanglement operations involving packaging, treating, and removing victims trapped in machinery where the entrapment is limited to digits or where the machine can be simply disassembled, or is constructed of lightweight materials that can be cut, spread, or lifted and only has simple hazards that are readily controlled		
Perform extrication and disentanglement operations from large machines		
Perform extrication and disentanglement operations involving packaging, treating, and removing victims injured or trapped in vehicles that present unique, exotic, or unfamiliar hazards or extrication challenges		
Perform advanced stabilization of unusual vehicle and machinery rescue situations		
Use all specialized search and rescue equipment immediately available		
Terminate a vehicle incident		

The Program Managers signature certifies that the listed objectives were met by the above Vehicle and Machinery Rescue Technician.
